"Metallocenes in Material Science - A Personal Perspective"

His research interests span a large area of synthetic organometallic chemistry ranging from catalyst design and synthesis to organometallic polymer chemistry. He is also interested in mechanistic studies in asymmetric induction processes. There are areas of research which are directly concerned with material science.

日時：平成 18 年 1 月 19 日（木）

16:00 - 17:30

場所：京都大学桂キャンパス

A2 棟 - 308 号室

連絡先：合成・生物化学専攻
